

Loomis Sayles U.S. Growth Equity Fund

FUND FACTSHEET

SHARE CLASS: S1/A (USD) - LU1429558650

March 2025

Fund highlights

- Invests primarily in equity securities of larger U.S. companies.
- Actively managed with a long-term approach, investing in businesses as partners rather than simply trading stocks.
- Employs a seven-step research framework to identify those few high quality businesses with sustainable competitive advantages and profitable growth, trading at significant discount to intrinsic value.
- Seeks to add value through bottom-up selection of a limited number of securities.
- Defines risk as permanent loss of capital, rather than short-term underperformance relative to its comparative index.
- The Fund is expected to invest at least 80% of its NAV in investments that qualify as aligned with E/S characteristics
- The Fund seeks to promote the environmental characteristic of climate change impact reduction.
- This product promotes environmental or social characteristics but does not have as its objective a sustainable investment. It might invest partially in assets that have a sustainable objective, for instance qualified as sustainable according to the EU classification.
- Minimum proportion of taxonomy alignment: 0%
- Minimum proportion of sustainable investments: 0%
- SFDR Classification : Art.8

RISK PROFILE

Lower risk	1	2	3	4	5	6	7	Higher risk
------------	---	---	---	---	---	---	---	-------------

The category of the summary risk indicator is based on historical data.

Due to its exposure to equity markets, the Fund may experience significant volatility, as expressed by its rank on the above scale.

The Fund investment policy exposes it primarily to the following risks:

- Equity securities
- ESG driven investments
- Exchange Rates
- Geographic concentration risk
- Growth/Value Equities risk
- Impact of the management techniques
- Risk Large Capitalization Companies
- Portfolio Concentration risk
- Stock Connect risk
- Sustainability risk

The Fund is subject to sustainability risks.

For more information, please refer to the section detailing specific risks at the end of this document.

PERFORMANCE DATA SHOWN REPRESENTS PAST PERFORMANCE AND IS NOT A GUARANTEE OF FUTURE RESULTS. More recent performance may be lower or higher. Principal value and returns fluctuate over time (including as a result of currency fluctuations) so that shares, when redeemed, will be worth more or less than their original cost. Performance shown is net of all fund expenses, but does not include the effect of sales charges, taxation or paying agent charges, and assumes reinvestment of dividends. If such charges were included, returns would have been lower. Performance for other share classes will be more or less depending on differences in fees and sales charges. Please see the additional notes at the end of this document for important information. Please read the important information given in the additional notes at the end of this document.

(1) Please refer to the prospectus of the fund and to the KID before making any final investment decisions.

Due to active management, portfolio characteristics are subject to change. References to specific securities or industries should not be considered a recommendation.

Calculation of performance during periods of share class inactivity (if applicable)

For periods when certain share classes were unsubscribed or not yet created (the "inactive share classes"), performance is imputed using the actual performance of the fund's active share class which has been determined by the management company as having the closest characteristics to such inactive share class and adjusting it based on the difference in TERs and, where applicable, converting the net asset value of the active share class into the currency of quotation of the inactive share class. The quoted performance for such inactive share class is the result of an indicative calculation.

Illustrative Growth of 10,000

The graph compares the growth of 10, 000 in a fund with that of an index. The total returns are not adjusted to reflect sales charges or the effects of taxation, but are adjusted to reflect actual ongoing fund expenses, and assume reinvestment of dividends and capital gains. If adjusted, sales charges would reduce the performance quoted. The index is an unmanaged portfolio of specified securities and cannot be invested in directly. The index does not reflect any initial or ongoing expenses. A fund's portfolio may differ significantly from the securities in the index. The index is chosen by the fund manager.

Risk Measures

The "Summary Risk Indicator" (SRI), as defined by the PRIIPs regulation, is a risk measure based on both market risk and credit risk. It is based on the assumption that you stay invested in the fund for the recommended holding period. It is calculated periodically and may change over time. The indicator is presented on a numerical scale from 1(the lowest risk) to 7 (the highest risk). The risk measures below are calculated for funds with at least a three-year history.

Standard deviation is a statistical measure of the volatility of the fund's returns.

Tracking Error is reported as a standard deviation percentage difference between the performance of the portfolio and the performance of the reference index. The lower the Tracking Error, the more the fund performance resembles to the performance of its reference index.

The Sharpe ratio uses standard deviation and excess return to determine reward per unit of risk.

The Information Ratio is the difference between the fund's average annualized performance and the reference index divided by the standard deviation of the Tracking Error. The information ratio measures the portfolio manager's ability to generate excess returns relative to the reference index.

Alpha measures the difference between a fund's actual returns and its expected performance, given its level of risk (as measured by beta). Alpha is often seen as a measure of the value added or subtracted by a portfolio manager.

Beta is a measure of a fund's sensitivity to market movements. A portfolio with a beta greater than 1 is more volatile than the market, and a portfolio with a beta less than 1 is less volatile than the market.

R-squared reflects the percentage of a fund's movements that are explained by movements in its benchmark index, showing the degree of correlation between the fund and the benchmark. This figure is also helpful in assessing how likely it is that alpha and beta are statistically significant.

Morningstar Rating and Category

© 2025 Morningstar. All Rights Reserved. The information, data, analyses and opinions ("Information") contained herein (1) include Morningstar's confidential and proprietary information (2) may not be copied or redistributed, (3) do not constitute investment advice (4) are provided solely for informational purposes (5) are not warranted to be complete, accurate or timely and (6) are drawn from fund data published on various dates. The information is provided to you at your own risk. Morningstar is not responsible for any trading decisions, damages or other losses related to the Information or its use. Please verify all of the Information before using it and don't make any investment decision except upon the advice of a professional financial adviser. Past performance is no guarantee of future results. The value and income derived from investments can go up or down. The Morningstar rating applies to funds having at least 3 years of history. It takes into account subscription fee, the yield without risk and the standard deviation to calculate for every fund its ratio MRAR (Morningstar Risk Adjust Return). Funds are then classified in decreasing order by MRAR: first 10 per cent receive 5 stars, the following 22.5 % 4 stars, the following 35 % 3 stars, following 22.5 % 2 stars, the last 10 % receive 1 star. Funds are classified within 180 European categories.

Reference Index

For indicative purposes only, the Fund's performance may be compared to the Reference Index. The Fund is unconstrained by the index and may therefore significantly deviate from it.

Asset allocation

Cash offset for Derivatives represents the amount of cash the portfolio manager should borrow if he's Long exposed via derivatives and vice versa. The weighting of the portfolio in various asset classes, including "Other," is shown in this table. "Other" includes security types that are not neatly classified in the other asset classes, such as convertible bonds and preferred stocks. In the table, allocation to the classes is shown for long positions, short positions, and net (long positions net of short) positions. These statistics summarize what the managers are buying and how they are positioning the portfolio. When short positions are captured in these portfolio statistics, investors get a more robust description of the funds' exposure and risk.

Fund Charges: The "All-in Fee" is defined as the aggregate of Management Fees and Administration Fees paid annually by each Sub-Fund, other than taxes (such as "Taxe d'abonnement") and expenses relating to the creation or liquidation of any Sub-Fund or Share Class; the All in Fee shall not exceed such percentage of each Sub-Fund's average daily net asset value as indicated in each Sub-Fund's description under "Characteristics." The All-in Fee paid by each Share Class, as indicated in each Sub-Fund's description, does not necessarily include all the expenses linked to the SICAV's investments (such as the tax d'abonnement, brokerage fees, expenses linked to withholding tax reclaims) that are paid by such SICAV. Unless otherwise provided for in any Sub-Fund's description, if the yearly actual expenses paid by any Sub-Fund exceed the applicable All-in Fee, the Management Company will support the difference and the corresponding income will be recorded under Management Company fees in the SICAV's audited annual report. If the yearly actual expenses paid by each Sub-Fund are lower than the applicable All-in Fee, the Management Company will keep the difference and the corresponding charge will be recorded under Management Company fees in the SICAV's audited annual report.

Equity Portfolio Statistics (if applicable)

The referenced data elements below are a weighted average of the long equity holdings in the portfolio. The Price/Earnings ratio is a weighted average of the price/earnings ratios of the stocks in the underlying fund's portfolio. The P/E ratio of a stock is calculated by dividing the current price of the stock by its trailing 12-months' earnings per share. The Price/Cash Flow ratio is a weighted average of the price/cash-flow ratios of the stocks in a fund's portfolio. Price/ cashflow shows the ability of a business to generate cash and acts as a gauge of liquidity and solvency. The Price/Book ratio is a weighted average of the price/book ratios of all the stocks in the underlying fund's portfolio. The P/B ratio of a company is calculated by dividing the market price of its stock by the company's per-share book value. Stocks with negative book values are excluded from this calculation. Dividend Yield is the rate of return on an investment expressed as a percent. Yield is calculated by dividing the amount you receive annually in dividends or interest by the amount you spent to buy the investment.

Fixed-Income Portfolio Statistics (if applicable)

The referenced data elements below are a weighted average of the long fixed income holdings in the portfolio. Duration measures the sensitivity of a fixed income security's price to changes in interest rates. Average maturity is a weighted average of all the maturities of the bonds in a portfolio, computed by weighting each maturity date by the market value of the security. Modified Duration is inversely related to percentage change in price on an average for a specific change in yield. The average coupon corresponds to the individual coupon of each bond in the portfolio, weighted by the nominal amount of these very same securities. The average coupon is calculated only on fixed rate bonds. The Yield to maturity (YTM) reflects the total return of a bond, if the bond is held until maturity, considering all the payments are reinvested at the same rate. This indicator can be calculated at the portfolio level, by weighting the individual YTM by the market value of each bond.

Special Risk Considerations

Equity securities: Equity securities are volatile and can decline significantly in response to broad market and economic conditions.

ESG driven investments: Environmental, social and governance ("Sustainable ESG") criteria are part of the investment policy. Sustainable ESG criteria aim to better manage risk, and generate sustainable, long-term returns. Applying Sustainable ESG criteria to the investment process may lead the Delegated Investment Manager to invest in or exclude securities for non-financial reasons, irrespective of market opportunities available if assessed while disregarding Sustainable ESG criteria.

Exchange Rates: Some Funds are invested in currencies other than their reference currency. Changes in foreign currency exchange rates will affect the value of those securities held by such Sub-Funds. For unhedged Share Classes denominated in currencies different than the Fund's currency, exchange rate fluctuations can generate additional volatility at the Share Class level.

Geographic concentration risk: Funds that concentrate investments in certain geographic regions may suffer losses, particularly when the economies of those regions experience difficulties or when investing in those regions become less attractive. Moreover, the markets in which the funds' invest may be significantly affected by adverse political, economic or regulatory developments.

Growth/Value Equities risk: Investments in equities tend to fluctuate more than investments in bonds, but also offer greater potential for growth. The price of equity investments may sometimes fluctuate quite dramatically in response to the activities and results of individual companies, as well as in connection with general market and economic conditions. Additionally, funds may hold equities having either a growth or value bias; prices of the growth bias equities tend to be more sensitive to certain market movements as they are often subject to factors such as future earnings expectations which may vary with changing market conditions; whereas equities with a value bias may continue to be underpriced by the market for sustained periods of time.

Impact of the management techniques: The risk linked to the management techniques is the risk of increased losses due to the use of financial derivatives instruments and/or securities lending and repurchase transactions.

Risk Large Capitalization Companies: Funds investing in large capitalization companies may underperform certain other stock funds during periods when large company stocks are generally out of favour.

Portfolio Concentration risk: Funds investing in a limited number of securities may increase the fluctuation of such funds' investment performance. If such securities perform poorly, the fund could incur greater losses than if it had invested in a larger number of securities.

Stock Connect risk: The Fund may invest in China "A" shares via the Shanghai-Hong Kong Stock Connect and/or Shenzhen-Hong Kong Stock Connect programs which are subject to additional clearing and settlement constraints, potential regulatory changes as well as operational and counterparty risks.

Sustainability risk: The Fund is subject to sustainability risks as defined in the Regulation 2019/2088 (article 2(22)) by environmental, social or governance event or condition that, if it occurs, could cause an actual or a potential material negative impact on the value of the investment. More information on the framework related to the incorporation of sustainability risks can be found on the website of the Management Company and the Delegated Investment Manager.

Please refer to the full prospectus, for additional details on risks.

The fund is a sub-fund of Natixis International Funds (Lux) I which is organized as an investment company with variable capital under the laws of the Grand Duchy of Luxembourg and is authorized by the financial regulator (the CSSF) as a UCITS - 2-8 avenue Charles de Gaulle, L1653 Luxembourg - RCS Luxembourg B 53023.
