## STEPS to a Well Bermuda 2014

## Fact Sheet

The STEPS survey of non-communicable disease (NCD) risk factors in Bermuda was carried out from November 2013 to December 2014. Bermuda carried out Step 1 (including optional modules), Step 2, and Step 3. Socio demographic and behavioural information was collected in Step 1. Physical measurements such as height, weight and blood pressure were collected in Step 2. Biochemical measurements were collected on a sub-sample of respondents to assess blood glucose and cholesterol levels in Step 3.
The survey was a population-based survey of adults aged 18 years and over. A simple random sample design was used to produce representative data for that age range in Bermuda. A total of 1,195 adults participated in Step 1 of the survey, giving a response rate among the households reached of $62.7 \%$. Of these persons, 467 adults participated in Step 3.
A repeat survey is planned for 2020 if resources permit.

| Results for adults aged 18 years and over (incl. 95\% CI) | Both Sexes | Males | Females |
| :---: | :---: | :---: | :---: |
| Step 1 Tobacco Use |  |  |  |
| Percentage who currently smoke tobacco | $\begin{gathered} 13.9 \% \\ (10.5-17.4) \end{gathered}$ | $\begin{gathered} 19.8 \% \\ (11.8-27.7) \end{gathered}$ | $\begin{gathered} 7.5 \% \\ (5.2-9.7) \end{gathered}$ |
